Record Breaker Installation Instructions:
-Isaiah Thacker

1. Open Android Studio
2. Select File -> New -> Project from Version Control -> GitHub
3. In the Git Repository URL field, paste the following:
   https://github.com/ThackerCI/PlatformerSE1.git
4. Click "Clone"
5. If applicable, select whether you wish to open the project in the current window or a new window.
6. If prompted, click "no" when asked about the VCS root.
7. Run the application on the device or emulator of your choice.

Gameplay Instructions:

The red square represents the player character. Blue squares represent floors and walls (collectively called "blocks".) Purple objects represent enemies. The circular disc on the right side of the screen represents the goal object (the "record.")

1. Press "Level 1" to begin the first (and currently only) level.
2. Press L and R (placeholder graphics) to make the character move left and right, respectively.
3. Press the "^" when the character is standing on a block to make the character jump.
4. Press X to fire a bullet. Bullets disappear over time, or when they hit a block or enemy.
5. Fire a bullet into an enemy to deal damage to it. Enemies currently die after being hit by two bullets.
6. To complete the level, collect the record by moving the character into it.
7. When the level is completed, press the "Return to Menu" button to return to the menu.
8. Press "Level 1" again to restart the level from the beginning.
